WE WERE A "NORMAL" FAMILY THEN IT CHANGED OVERNIGHT.
A PARENT/CAREGIVER’S BACKDROP
NORMALIZING YOUR EXPERIENCES AS A PARENT/CAREGIVER

Thoughts
- Thoughts of your child dying
- Intrusive memories you cannot stop/or control
- Thinking you are a bad parent
- Thoughts of hopelessness of the future

Feelings
- Worrying about your children
- Feeling jumpy or on edge
- Feeling helpless or scared
- Feeling emotionally numb
- Overwhelmed with guilt and/or shame

Actions
- Being more protective of your child[ren]
- Avoidance behaviours
- Not eating, sleeping or taking care of yourself
- Difficulty maintain relationships
- Physical symptoms can include: sweating, dizziness and rapid heart rate when reminded of the event.
UNDERSTANDING YOUR BRAIN REMOVES BLAME

A glimpse Inside

Hippocampus

Amygdala
What is a normal response after a traumatic experience?

TRAUMATIC STRESS REACTIONS

1. RE-EXPERIENCING   2. AVOIDANCE   3. HYPER-AROUSAL
PAEDIATRIC CANCER SURVIVORS AND THEIR SIBLINGS
MYTHS ABOUT TRAUMA

• It is BAD Parenting, and not PTSD.
• Kids don’t remember what has happened to them if they have no memories.
• Newborns don’t feel pain
• An unborn child cannot experience trauma.
Research Findings

Percent of children & parents with significant traumatic stress symptoms after medical events

Summary of research findings from The Children's Hospital of Philadelphia. Summarized from peer-reviewed research studies, 1999-2009.

Note: Traumatic stress levels in children in pediatric intensive care has not yet been well-documented.
TRAUMATIC MEDICAL EXPERIENCES FOR CHILDREN AND YOUTH
• Seeing sick children

• Being held down

• Knowing about the loss of a child

• Being left alone

• Painful medical procedures and chemotherapy

• Having a noticeable injury or scar

• Exposure to medical equipment that looks scary

• Uncertainty about what will happen next

• Thinking their illness is punishment for something they did wrong

• Fear of death

• Treatment outcomes, such as hair loss and what others will think of them
HOW DO I KNOW WHETHER MY CHILD IS SUFFERING WITH PTSS/PTSD?
Your child/youth’s behaviour is a window into how she/he is doing. Listen and watch your child/youth for signs and symptoms.
AGES 5-12 YEARS OF AGE

- May put events of the trauma in the wrong order.

- May think that there were signs of the trauma was going to happen, and may result in them thinking they will see the signs again to avoid future traumas.

- This age-group may not have flashbacks, but may have nightmares.

- Children of this age will show signs in their play. Repeating the story of their trauma over and over without it seeming the story change. They may fit part of their trauma in their daily lives, such as carrying something associated with the hospital.

- Regressive behaviour, such as bedwetting, thumb sucking, diapers

- Problems at school with behaviours
AGES 12-18

- Teens are more likely than younger children or adults to show impulsive and aggressive behaviours.
- Poor concentration and distract easily
- Loss of interest in his or her activities
- Problems at school and/or home
- Problems with peers
- Symptoms of depression, such as numbing and withdrawal
- Thoughts of suicide
- Self-injury
- drugs and alcohol
What should you do?
A PARENT/CAREGIVER NEEDS TO TAKE CARE OF THEMSELVES
WHAT CAN HAPPEN?

- Parents often put their own needs aside to care for their child, which can result in increased symptoms and decreased coping with diagnoses and treatment.

- A parent may become overwhelmed with symptoms, have trouble complying with their child’s caregiving needs (medications), and may respond inappropriately to health care providers. In addition, it may lead to missed appointments and/or difficulty attending and understanding information during visits.

- It is not until treatment is finished that parents begin to “fall apart.” It could actually be two to three years later.

- Maladaptive coping, such as alcohol and/or drugs.
Five Areas of Self-Care During and After Treatment

1. PHYSICAL
2. LIFESTYLE
3. MENTAL AND EMOTIONAL
4. SOCIAL SUPPORT
5. SPIRITUAL CONNECTION
HOW TO HELP YOUR CHILD/YOUTH

• Learn the facts, signs, and symptoms of PTSS/PTSD.

• Monitor your child’s/teen’s symptoms (behaviours).
  
  • Maintain open communication with teachers.

  • See your child’s behaviours as a clue instead of s/he is trying to annoy you or frustrate you.

• Spend time with your child/teen.

• Have your child/teen do extracurricular activities (think outside the box if on treatment).

• Access professional help
THERE IS TREATMENT
“Trauma can become vital part of your life-just like stones can support and strengthen the root structure of a tree. Like a tree, you are resilient. With patience and support, your roots can be restored, and your branches will spread again.”
